PROUDLY MADE IN  THE USA SINCE 1996

Why Meg-Mo Blades Last Longer

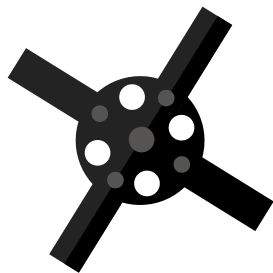

MUCH HARDER STEEL

Our blades are made of high-carbon steel that has been heat treated to a rating of 45 on the Rockwell-C scale of hardness. Traditional bar blades are made of a mild steel rated at 8, which bends and goes dull quickly.

PIVOTING BLADES

Our cutting edges pivot on a hardened shoulder bolt, flexing out of the way of obstacles. This eliminates damage to the blade and spindle. By diffusing the impact, rocks don't get thrown while mowing.

LESS SHARPENING

Because our blades are much harder than traditional blades, they hold their edge and all of the length much longer. A 120-grit flap disc sanding wheel or hand file will polish them without lowering the temper.

LONGER HOURS

A combination of harder steel and pivoting action results in hundreds of hours of use before sharpening or replacement is necessary. Our blades last 5-6 times longer than traditional blades.

LESS REPLACEMENT

Our average customer replaces the cutting knives every 4-5 years. Of course, lasting time depends on the hours and conditions of use. Meg-Mo blades are designed to last longer, saving you time and money.

YEARS OF SERVICE

Our blades last years instead of weeks or months like traditional blades. When you purchase Meg-Mo blades you are getting a product that will give you a great value for your money over years of service.

Ready to order?

Here's what you'll need:

- Make and model of mower
- Deck size
- OEM part number of the blade you are currently using. Look at your blade, the number is engraved on the top side of the blade usually. Don't look it up online; info there could be wrong.
- Center hole shape on the blade you are currently using. At this time, we can only fit circle or star center hole styles.
- Payment. Visa, MasterCard, Discover and American Express accepted.

This product is will not work on push mowers with rope pull start or mowers with timed decks.
